

Introduction and Overview to the Wooden Push Cart

The original plans for this cart was in a collectable magazine called "Profile". While the original plans are available on www.kartbuilding.net, this set of plans hopes to make building this push cart easier and also adds more details such as adding a brake.

This cart is designed for children. Its actually quite small being 1 meter long by 1/2 meter wide. With the plastic wheels, steering setup, U-bolts to secure the stub axles and simple braking system, this kart could be damaged easily if more than one child got on-board at the same time or if the cart went too fast down a hill.

A nice feature of this cart is that it has a complete steering setup with a steering wheel and track rods. (The other wooden go-kart plans on kartbuilding.net use a single pivoting steering axle.)
