

DETAIL C
SCALE 1 : 2

The Steering Column is secured to the Bonnet Center using split-pins and washers. This allows the steering column to rotate freely without moving in/out.

Thin Plywood bent to shape.
See next page.

The assembly of the Bonnet is a little tricky. Before the pieces of timber is nailed and glued together, the Steering Column (Steel bar) must be put into position. Once the bonnet assembly is put together, it won't be possible to remove the Steering Column.

See next page for measurements and sizes of each part.
